CUSTOMER SUPPORT TICKET PRIORITY PREDICTION AND AUTOMATED ASSIGNMENT SYSTEM USING AGENTFORCE

1. INTRODUCTION

1.1 Project Overview :

Customer support teams receive a large number of tickets daily, while prioritization and assignment can be manual. This project provides a Salesforce-based solution that analyzes ticket information, classifies urgency, assigns the appropriate support level, and initiates automation for critical cases.

1.2 Purpose :

- Automatically classify support tickets as High, Medium, or Low priority.
- Retrieve the latest support ticket associated with a customer Account.
- Reduce manual prioritization and assignment effort.
- Create an urgent handling task for High-priority tickets.
- Use Agentforce to analyze ticket details and trigger backend automation.
- Improve ticket response and resolution efficiency.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS		I'm trying to	But	Because	
	I am (Customer)				Which makes me feel

PS-1	Support Agent	focus on critical tickets first	tickets are not always prioritized automatically	ticket prioritization can be manual	frustrated
PS-2	Customer	get urgent issues resolved quickly	critical issues may wait behind lower-priority tickets	support teams handle large ticket volumes	concerned
PS-3	Support Manager	assign tickets to the right support level	assignment may require manual decisions	ticket urgency is not consistently analyzed	overwhelmed
PS-4	Support Agent	identify urgent issues from descriptions	important keywords can be missed	ticket descriptions contain different urgency signals	uncertain
PS-5	Support Manager	reduce SLA-related risk	older unresolved tickets may remain unnoticed	SLA risk needs additional checking	concerned

Customer Support
Smarter Support. Happier Customers.

Problem Statements

Challenges in Managing Customer Support Tickets Today

*Support Today
Stronger Tomorrow*

High Volume of Tickets

Support teams receive a large number of tickets daily, making it difficult to manually review and prioritize them.

Manual Prioritization

Ticket priority is often determined manually, which is time-consuming, prone to errors, and inconsistent.

Incorrect Assignment

Tickets are not always assigned to the right support agent or team, leading to delays and reassignments.

Delayed Resolution

Manual processes and lack of real-time insights result in slower response times, especially for critical issues.

Poor Customer Experience

Delays in resolution and lack of proactive communication lead to dissatisfied customers and reduced trust.

Need

A smart, automated system that can classify ticket priority, assign tickets to the right agent, and reduce response time using AI.

Goal

Faster resolutions, higher customer satisfaction, and a more efficient support team.

From Challenges to Smarter Support.

People + AI = Better Support

2.2 Empathy Map Canvas

User Persona: Support Agent

- **Think & Feel:** Wants critical issues identified quickly so urgent customer problems receive attention.
- **Hear:** Receives customer issue descriptions and support requests.
- **See:** Ticket status, issue type, description, priority level, assignment, and SLA risk.
- **Say & Do:** Reviews tickets, handles assigned cases, and focuses on urgent support issues.
- **Pain:** Manual prioritization, missed urgency signals, and delays in handling critical tickets.
- **Gain:** Automatic priority classification, clearer assignment, urgent-task creation, and reduced manual effort.

2.3 Brainstorming & Idea Prioritization

Ideas Considered

- Manual ticket registers
- Spreadsheet-based ticket tracking
- Standalone support portal
- Salesforce CRM with Agentforce

Final Selection

Salesforce CRM selected due to:

- Automation through Salesforce Flow
- AI-assisted ticket analysis through Agentforce
- Automatic priority classification
- Automatic urgent-task creation
- Reduced manual support effort

Customer Support
Smarter Support. Happier Customers.

Brainstorming & Idea Prioritization

From Ideas to Impact

*Big Ideas
Better Support*

1

Brainstorming

Let's explore ideas to solve our customer support challenges!

2

Idea Prioritization

We evaluated the ideas based on Impact and Feasibility.

3

Top Prioritized Ideas

These ideas will add the most value and are feasible to implement.

Collaborate. Prioritize. Build a Better Support Experience.

*Ideas Today.
Happier Customers Tomorrow.*

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Stages:

- Ticket Creation → Account Identification → Ticket Retrieval → Description Analysis → Priority Classification → Agent Assignment → Urgent Task Creation → Support Handling → Resolution

3.2 Solution Requirements **Functional Requirements**

FR No	Requirement
FR-1	Support ticket creation and management
FR-2	Account and Contact association
FR-3	Ticket description analysis
FR-4	Automatic priority classification
FR-5	High-priority task creation
FR-6	Support agent assignment

FR-7	SLA breach risk checking
FR-8	Agentforce conversational analysis

Non-Functional Requirements

NFR	Description
Usability	Clear Agentforce interaction and understandable priority messages
Reliability	Consistent priority classification based on configured conditions
Performance	Quick retrieval and analysis of the latest support ticket
Security	Controlled Salesforce access to customer and ticket information
Maintainability	Flow and Agentforce configuration can be updated
Scalability	Supports increasing support-ticket volumes through Salesforce automation

3.3 Data Flow Diagram

Flow:

Customer / Support Request → Account → Latest Support Ticket → Ticket Description → Analyze Description → Priority Level → High/Medium/Low Decision → Agent Assignment → High-Priority Task (if applicable) → Final Response

Agentforce: User provides Account Name → Agentforce Support Ticket Priority Analysis → Auto-Launched Flow → Ticket Analysis → Priority and Assignment Output → Response to User.

3.4 Technology Stack

Layer	Technology
Platform	Salesforce

Database	Support_Ticket_Intelligence__c with Account, Contact, User and Task records
Logic	Auto-Launched Flow
AI	Agentforce
Agent Configuration	Support Ticket Priority Analysis subagent
Automation	Flow Decision, Assignment and Create Records
Output	Agentforce conversation response

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

Problem	Solution	Benefit
Manual ticket prioritization	Flow analyzes description and sets priority	Faster identification of urgent cases
Urgent issues may be missed	High-priority keyword decision	Critical cases receive attention
Manual task creation	Flow creates Task for High priority	Reduced manual effort

Manual support assignment	Flow sets assigned support level	More consistent handling
SLA risk can be overlooked	Optional SLA Risk decision	Better risk awareness
Need for conversational access	Agentforce subagent	AI-assisted interaction

Problem – Solution Fit

Right Problem. Right Solution. Real Impact.

Turning Support Challenges into Success

The Fit: Solving Real Problems for Real People

By addressing the actual pain points of support teams and customers, this solution delivers measurable value and a better support experience.

Faster Resolution
Critical issues handled quickly

Happier Customers
Improved satisfaction and trust

More Productive Teams
Reduced manual effort

Data-Driven Decisions
Continuous improvement

People + AI + Automation = Better Support

Support Today. Stronger Tomorrow.

4.2 Proposed Solution

Functional Requirements

Parameter	Description
Problem	Manual ticket prioritization and assignment causing delays in handling critical customer support issues
Solution	Salesforce-based Customer Support Ticket Priority Prediction and Automated Assignment System
Innovation	Agentforce AI + Auto-Launched Flow for analyzing ticket descriptions, automatically classifying priority,
	assigning support level, and triggering urgent-task automation
Impact	Faster identification of critical tickets, reduced manual effort, improved response time, and better support-team productivity
Business Model	Customer support operations involving customers, support agents, support managers, and AI-assisted ticket handling

Scalability	Supports increasing support-ticket volumes through Salesforce automation, with scope for additional assignment rules, SLA monitoring, and priority indicators
-------------	---

4.3 Solution Architecture

Components:

Users / Support Team → Agentforce → Support Ticket Priority Analysis → Auto-Launched Flow → Account & Ticket Data → Description Analysis → Priority Decision → Task / Assignment → Final Message → Agentforce Response

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- Agile methodology
- Epics → Stories → Story Points
- Sprint-based execution
- Velocity calculation used for estimation

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Developer Setup	USN-1	As a system administrator, I want to configure the Salesforce environment for Support Ticket Intelligence so that the support	3	High	Member1

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
			automation solution can be developed.			
Sprint-2	Data Modeling	USN-2	As an admin, I want to create the Support Ticket Intelligence object with required fields and relationships so that customer support ticket information is stored systematically.	5	High	Member2
Sprint-2	Data Modeling	USN-3	As a support user, I want support tickets to be associated with Accounts and Contacts so that the latest customer ticket can be identified for analysis.	3	High	Member3
Sprint-3	Automation	USN-4	As a support agent, I want an Auto-Launched Flow to retrieve the latest ticket and analyze its description so that ticket priority can be determined automatically.	5	High	Member4

Sprint-3	Automation	USN-5	As a support agent, I want tickets to be automatically classified as High, Medium, or Low based on configured urgency conditions so that critical issues receive attention first.	5	High	Member4
Sprint-4	Agentforce & Automation	USN-6	As an AI Agent (Agentforce), I want to analyze support ticket details and trigger the backend Flow so that manual ticket prioritization is reduced.	8	High	Member1
Sprint-4	Task & Assignment	USN-7	As a support manager, I want High-priority tickets to automatically create an urgent handling task and assign the appropriate support level so that critical tickets are handled quickly.	5	High	Member2
Sprint-5	SLA Management	USN-8	As a support manager, I want the system to check SLA breach risk for older unresolved tickets so that potential SLA issues can be identified.	5	Medium	Member3
Sprint-6	Agentforce & Conversational Support	USN-9	As a support user, I want to provide an Account Name to Agentforce and receive the ticket ID, priority, assigned agent.	5	Medium	Member4

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Aug 2026	29 Aug 2026	20	29 Oct 2026
Sprint-2	20	6 Days	31 Aug 2022	05 Sep 2026		
Sprint-3	20	6 Days	07 Oct 2026	12 Oct 2026		
Sprint-4	20	6 Days	01 Nov 2026	10 Nov 2026		

6. Project Development Phase:

What you'll learn

1. Data Modelling
2. Fields and Relationships
3. Lightning App Builder
4. Record Triggered Flows
5. Apex and Apex Triggers
6. Batch Apex
7. Scheduled Apex

Milestone 1: Salesforce Account

Activity 1: Creating Developer Account

Creating a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign up form, enter the following details :

1) First name & Last name

2) Email

3) Role : Developer

4) Company : College Name

5) Country : India

6) Postal Code : pin code

7) Username : should be a combination of your name and company This need not be an actual email id, you can give anything in the format :

username@organization.com Click on sign me up after filling these.

Activity 2: Account Activation

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account
3. Give a password and answer a security question and click on change password.

4. Then you will redirect to your salesforce setup page.

Milestone 2: Data Management-Objects

Custom Object

Object Name:

Support Ticket Intelligence

API Name:

Support_Ticket_Intelligence__c

Fields

Field Label	API Name	Data Type	Description
Ticket Number	Ticket_Number__c	Auto Number	TKT-{0000}

Customer	Customer__c	Lookup (Account)	Related Account
Contact	Contact__c	Lookup (Contact)	Customer contact
Issue Type	Issue_Type__c	Picklist	Technical, Billing, General
Description	Description__c	Long Text Area	Issue details
Priority Level	Priority_Level__c	Picklist	Low, Medium, High
Status	Status__c	Picklist	New, In Progress, Resolved
Created Date	Created_Date__c	Date	Ticket date
Assigned To	Assigned_To__c	Lookup (User)	Support agent
SLA Breach Risk	SLA_Breach_Risk__c	Checkbox	Risk flag
Resolution Time (hrs)	Resolution_Time__c	Number	Time taken

Auto-Launched Flow Logic (Modified for this Project)

1. Flow Type

Auto-Launched Flow (No Trigger or called from Agentforce)

2. Variables

Input Variable

Label	API Name	Type	Input
Account Name	varAccountName	Text	Yes

Output Variables

Label	API Name	Type	Output
Account Id	varAccountId	Text	Yes
Ticket Id	varTicketId	Text	Yes
Priority Level	varPriorityLevel	Text	Yes

Assigned Agent	varAssignedTo	Text	Yes
Action Message	varActionMessage	Text	Yes

3. Step-by-Step Flow Implementation

Step 1: Get Account

Element: Get Records

- Label: Get Account • Object: Account • Condition:
 - Name Equals {!varAccountName}
- Sort: CreatedDate DESC
- Store: Only first record

Step 2: Assignment (Store Account Id)

Element: Assignment

- Label: Store Account Id

Set:

- varAccountId = {!Get_Account.Id}

Step 3: Get Ticket Record

Element: Get Records

- Label: Get Ticket
- Object: Support_Ticket_Intelligence__c • Condition:
 - Customer__c Equals {!varAccountId}
- Sort: CreatedDate DESC
- Store: Only first record

Step 4: Assignment (Store Ticket Id)

Element: Assignment

- Label: Store Ticket Id

Set:

- `varTicketId = {!Get_Ticket.Id}`

Step 5: Decision (Analyze Description)

Element: Decision

- Label: Analyze Description

Outcomes:

High Priority

- Description contains:
 - "urgent"
 - "not working"
 - "failure"

(Use multiple conditions with CONTAINS)

Medium Priority

- Description contains:
 - "issue"
 - "slow"
 - "delay" **Default**

Outcome

- Low Priority

Step 6: Assignment (Set Priority Level)

High Path

- `varPriorityLevel = "High"`

Medium Path

- `varPriorityLevel = "Medium"`

Low Path

- varPriorityLevel = "Low"

Step 7: Decision (High Priority Check)

Element: Decision

- Label: Is High Priority

Condition:

- varPriorityLevel Equals "High"

Step 8: Create Task (Only High Priority)

Element: Create Records

- Object: Task

Set Fields:

- Subject = "Urgent Ticket Handling" • WhatId = {!varTicketId}
- Priority = High
- Status = Not Started

Step 9: Assignment (Assign Agent Name)

Element: Assignment

- Label: Set Assigned Agent **Set:**
- varAssignedTo = "Senior Support Agent"

Step 10: Optional SLA Check

Decision: SLA Risk

Condition example:

- If Created Date older than 2 days Then:
- (Optional internal flag or message)

Step 11: Final Output Message

Element: Assignment

- Label: Set Final Message Set varActionMessage:
- High: "High priority ticket detected. Assigned to senior agent."
- Medium: "Ticket marked as medium priority. Will be handled shortly."
- Low: "Tickets are low priority and queued for processing."

Step 12 : Save Flow

Label Name : Support_Ticket_Intelligence Active
Flow

4. Final Flow Structure

Start

- Get Account
- Assignment (Account Id)
- Get Ticket
- Assignment (Ticket Id)
- Decision (Analyze Description)
- Assignment (Priority Level)
- Decision (High Priority)
- Create Task
- Assignment (Assigned Agent)
- Optional SLA Decision
- Assignment (Final Message)
- End

Name

Support Ticket Priority Analysis

API Name

Support_Ticket_Priority_Analysis

Classification Description

This topic analyzes customer support tickets to determine priority based on issue description and urgency. It handles user requests related to ticket status, issue severity, and support prioritization.

Scope

Your job is only to analyze support ticket descriptions, determine the priority level (High, Medium, Low), and trigger backend automation for task assignment. Do not handle unrelated requests such as billing, subscription management, or account updates.

Instructions

Follow these steps when this topic is triggered:

1. Ask the user to provide the Account Name if not already given.
2. Retrieve the latest support ticket associated with the Account.
3. Read and analyze the ticket description.
4. Determine priority based on keywords:
 - High Priority: contains "urgent", "not working", "failure"
 - Medium Priority: contains "issue", "slow", "delay"
 - Low Priority: if none of the above
5. Set the priority level accordingly.
6. If the ticket is High Priority:
 - Trigger the Auto-Launched Flow
 - Ensure a task is created for immediate handling
7. Assign the ticket to the appropriate support level (e.g., senior agent for high priority).
8. Return a clear response message to the user:
 - High → Inform urgent handling is initiated
 - Medium → Inform issue will be handled shortly
 - Low → Inform ticket is queued
9. Do not update records directly or send emails. Use Flow for all actions.

7. FUNCTIONAL & PERFORMANCE TESTING

During testing, Salesforce configurations were verified to ensure that the created objects, fields, records, and Agentforce features were working correctly. The testing included checking data creation and management, Agentforce configuration, subagent responses, and the execution of configured actions.

The following areas were tested:

- Custom object and field creation.
- Record creation and data management.
- Field values and required-field validation.
- Agentforce configuration and availability.
- Agentforce subagent instructions and responses.
- Agentforce actions and Flow execution.
- Correct handling of user requests.
- Validation of the final output generated by Agentforce.

All major features were tested successfully to ensure that the Salesforce solution works as expected.

8. ADVANTAGES & DISADVANTAGES

Advantages

- **Centralized Data Management** – Salesforce stores project information in an organized and accessible format.
- **Easy Object Management** – Objects, fields, and records can be created and managed according to business requirements.
- **Reduced Manual Work** – Agentforce can perform configured tasks automatically.
- **AI-Powered Assistance** – Agentforce helps users interact with Salesforce data using natural language.
- **Subagent-Based Processing** – Different subagents can be configured for specific tasks.
- **Faster Information Access** – Users can obtain required information without manually searching through multiple records.

- **Improved Productivity** – Automation reduces repetitive activities.
- **Consistent Responses** – Configured Agentforce instructions help provide structured responses.
- **Scalable Solution** – Additional objects, fields, actions, and subagents can be added when requirements increase.
- **Better User Experience** – Users can interact with Salesforce through a conversational interface. **Disadvantages**
- **Configuration Dependency** – The system depends on correct Salesforce configuration.
- **Data Accuracy Dependency** – Incorrect or incomplete records may affect the results.
- **Agentforce Dependency** – Agentforce responses depend on properly configured instructions, actions, and available data.
- **Limited Scope** – The configured subagent can perform only the tasks included in its instructions and actions.
- **Maintenance Required** – Objects, fields, Flows, actions, and subagent instructions may need updates when requirements change.
- **Permission Dependency** – Users need appropriate Salesforce permissions to access required objects and features.
- **Automation Dependency** – Incorrect Flow or action configuration can affect the expected output.
- **Expansion Requires Configuration** – Adding new business functions may require additional Salesforce setup.

9. CONCLUSION

The Salesforce project demonstrates how **Data Management, Agentforce Configuration, and Agentforce Subagent Configuration** can be combined to create an organized and intelligent Salesforce solution.

The project focuses on managing Salesforce data through objects and records while using Agentforce to provide AI-based assistance. The configured subagent can understand user requests and perform the actions included in its configuration.

This solution helps reduce manual effort, improve access to information, and provide a better user experience. It also demonstrates how Salesforce automation and Agentforce can be used together to support business requirements.

10. FUTURE SCOPE

- Add additional Salesforce objects and fields based on future requirements.
- Create more Agentforce subagents for different business activities.
- Add additional Agentforce actions and Flow automation.
- Improve the intelligence of Agentforce responses.
- Integrate additional Salesforce data sources.
- Add dashboards and reports for better data analysis.
- Implement more advanced automation and validation rules.
- Improve security and user access controls.
- Add more conversational capabilities to Agentforce.
- Expand the solution for larger business requirements.
